

Reading & Processing Files in C

→ as scientists, one of the most important things we do with computers is to read, write, and process data files!

→ I don't love how Zybooks handles this topic (Chapter 3).

Example: We have a data file, which contains lines of data. Each line is of the following format:

Last Name First Name XX YY ZZ
 tab tab tab

Where XX, YY, ZZ are test scores. The fields are separated by tab characters. There is a line feed character (\n) at the end of each line.
